1. Background

The lighthouse at Skarvik was lit for the first time on a wet October evening in 1871, and for almost a century afterwards the same family kept its lamp burning. Their log books survive in the town archive: eleven volumes of weather, ships, repairs and the occasional complaint about the price of paraffin.

The station was modernised in stages. A clockwork rotation mechanism replaced the hand-cranked one in 1902, an acetylene burner arrived in 1923, and electricity followed in 1951, carried across the sound on a cable that the fishermen swore would never hold.

When the light was automated in 1968 the last keeper moved to a house in the village from which, on clear nights, he could see the beam sweep past his window every twelve seconds. He kept writing the log for another two years, out of habit.

Most entries are short. Wind from the south-west, fresh; visibility good; two steamers northbound before midnight. But every few pages the keeper allowed himself a sentence more, and those sentences are the reason people still read the logs today.

2. Method

Most entries are short. Wind from the south-west, fresh; visibility good; two steamers northbound before midnight. But every few pages the keeper allowed himself a sentence more, and those sentences are the reason people still read the logs today.

Daily life followed the light. The lamp was trimmed at dusk and dawn, the lens polished every morning, and the brass fittings once a week whether they needed it or not. Supplies came by boat every second Thursday, weather permitting, which in February it rarely did.

Today the tower belongs to a foundation that opens it to the public in summer. The log books have been scanned, transcribed and indexed, and a small exhibition in the old oil store shows the lamp, the auger and a page from the winter of 1893.

In the winter of 1893 the ice reached the outer skerries, something no one in the village had seen before. The keeper walked across to the nearest island with his son, measured the ice with an auger and wrote that it was thicker than the kitchen table and twice as level.

3. Structures

In the winter of 1893 the ice reached the outer skerries, something no one in the village had seen before. The keeper walked across to the nearest island with his son, measured the ice with an auger and wrote that it was thicker than the kitchen table and twice as level.

Visitors were rare and were recorded with care: a priest in 1880, a painter who stayed for three weeks in 1911 and left a small oil sketch of the tower, and a group of surveyors whose instruments, the log notes drily, were less reliable than the keeper's barometer.

The transcription project took four years and relied almost entirely on volunteers. Handwriting changed from keeper to keeper, abbreviations drifted, and the ink of the earliest volumes had faded to the colour of weak tea, so every page was read twice by different people.

The station was modernised in stages. A clockwork rotation mechanism replaced the hand-cranked one in 1902, an acetylene burner arrived in 1923, and electricity followed in 1951, carried across the sound on a cable that the fishermen swore would never hold.

Structure	Material	Built	Length (m)	Cost (MNOK)	Condition
North pier	Concrete	1954	212	18.4	Good
South pier	Timber	1931	148	9.7	Fair
Ferry berth	Steel	1988	96	31.2	Good
Fish market quay	Concrete	1967	175	22.9	Poor
Boatyard slip	Concrete	1972	64	4.1	Fair
Marina pontoon A	Composite	2009	120	12.6	Good
Marina pontoon B	Composite	2011	120	12.6	Good
Old customs steps	Granite	1889	22	0.8	Fair
Total			957	112.3	

4. Findings

The station was modernised in stages. A clockwork rotation mechanism replaced the hand-cranked one in 1902, an acetylene burner arrived in 1923, and electricity followed in 1951, carried across the sound on a cable that the fishermen swore would never hold.

When the light was automated in 1968 the last keeper moved to a house in the village from which, on clear nights, he could see the beam sweep past his window every twelve seconds. He kept writing the log for another two years, out of habit.

What emerges from the logs is not a story of heroism but of attention: a century of people who looked at the same stretch of sea every day and wrote down what they saw, so that others could find their way home in the dark.

Daily life followed the light. The lamp was trimmed at dusk and dawn, the lens polished every morning, and the brass fittings once a week whether they needed it or not. Supplies came by boat every second Thursday, weather permitting, which in February it rarely did.

5. Recommendations
